

BIOHAR FORTE® SC

SOIL INOCULATING AND PLANT GROWTH PROMOTER
BIO INPUT FOR AGRICULTURAL USE

GUARANTEED COMPOSITION

Active ingredient

Bacillus polymyxa (1 x 10⁸ UFC/mL)
Trichoderma harzianum (0.25 X 10⁸ Conidia /mL)
Trichoderma asperellum (0.25 X 10⁸ Conidia /mL)
Trichoderma koningii (0.25 X 10⁸ Conidia /mL)
Trichoderma viride (0.25 X 10⁸ Conidia /mL)

Inert Ingredient

Natural adhesives and surfactants

* Updated Technical Sheet: 08/27/2020

Sales registration No. 11930

BIOHAR FORTE® SC

It is a **PROBIOTIC** product for agricultural use for the soil, which contains a mixture of fungal conidia and bacterial units, which play an important role in plants due to their action as an antagonist of soil pathogens, the regulation of nematode populations and biostimulants of the development of plants, in most crops.

BIOHAR FORTE® SC is composed of strains of *Bacillus polymyxa*, *Trichoderma harzianum*, *Trichoderma asperellum*, *Trichoderma koningii* and *Trichoderma viride*, which have the ability to colonize the root growth zone (rhizosphere), stimulate growth, solubilize phosphorus, fix nitrogen, control some diseases caused by fungi, bacteria and control plant parasitic nematodes. The biological activity of **BIOHAR FORTE® SC** begins when the product comes into contact with the soil in which, by asexual division or by means of the conidia, they initiate the germination and colonization process.

RECOMENDACIONES DE USO

CULTIVE	DOSE / LITER	APPLICATION FORM
Avocado	1 to 2.5 c.c./ Liter	Apply to the soil in pre-sowing and monthly after sowing in the form of a drench, sprinkler or drip irrigation.

STORAGE

BIOHAR FORTE® SC should be stored in its original and closed container, in a cool, dry and shady place. In these conditions it lasts between three and six months after being formulated

PREPARATION

Before using it, it is recommended to shake the **BIOHAR FORTE® SC** and dilute it by one or two liters until it is completely homogenized and then proceed to complete the desired volume. It must be ensured that it covers the plant and the soil in a homogeneous way where mite problems occur. High pressure nozzles are recommended to create a mist and fine droplets. To achieve greater effectiveness of **BIOHAR FORTE® SC** it is preferable to apply it as a preventive.

COMPATIBILITY

BIOHAR FORTE® SC is compatible with most insecticides. Do not mix with fungicides of unknown compatibility. Consult the Technical Department of **BIOQUIRAMA** for your concerns or suggestions.

PRESENTATION

BIOHAR FORTE® SC is presented to the public in concentrated suspension in containers of: 250 c.c. 1, 4, 10 and 20 Liters.

SECURITY PERIOD

It does not require a grace period, but it is advisable to use the minimum protective equipment for spraying the product on crops. For better product effectiveness consult our technical department.

TOXICOLOGICAL CLASSIFICATION: III

Microbial consortium for soil
